

Do you have
PATCHY or
TOTAL
HAIR LOSS?

New Research Study

If you struggle with patchy or complete hair loss, you may have **alopecia areata, totalis or universalis**, common conditions that affect millions of people.

Right now, doctors at our practice are conducting a new research study that may be able to help. The study is for an investigational oral medication taken twice daily for approximately 6 months.

If you qualify and choose to participate, you will receive all study-related care at no cost and may also be compensated for your time and travel to attend study visits.
